

## Update From South Sudan

MAMA Project has been working very closely with TWIC (Transformation of the World in Christ) since Rev. Paul reached out to us for help and we have been in constant contact. He visited MAMA Kenya in Nairobi where he met Evelina Ndilu from Nairobi and Julia Christensen from MAMA Project, USA. Since then, we have had regular strategy meetings on Zoom except Rev. Paul and Dr. Biar missed our last meeting because it rained (That is very good news!) and they got stuck in the mud on the road back from the IDP camp (Bad news...).

We have sent the first funds for the feeding program, which is underway! We have also ordered lifesaving medications to treat the diseases that are rampant in the camp, like malaria and pneumonia.

In our next update, we'll send the pictures we just received of the starting of the Feeding Program!

More help is urgently needed!

## Meet Dr. Biar Akuei

My name is Dr. Biar Akuei, a registered nurse by profession. Graduated from nursing college in 2019. Now I am working with the government from 2020 to date and also I am volunteering myself to help internal displaced persons camps in Twic county in the nutrition department through Transformation of the World in Christ (TWIC) from 2022. Especially malnourished children because it is my profession with the experiences of 4 years in both Nursing and Nutrition department.

*Dr. Biar Akuei started registration for malnourished children in IDP Camps South Sudan.*

*Majak Deng, 9 months old in IDPS Camp.*

*Aluel Deng got card for her child feeding.*

*Women attending registration with malnourished children at IDPs.*

*Dr. Biar Akuei weighing the malnourished children.*

The children in these pictures and many others need your help! [This report](#) shows how our partners used the first \$3,000 that we sent, which will be used up over one month. We need to continue to increase the amount that we raise.

Please tell your family and friends, your church, your school, your club. Take a collection! Announce the need! The money that we can send will directly save the lives of children at the brink of death from starvation and diseases that come from the kind of conditions they are living in.

Your gifts to them will include food, clean water, and medication to prevent and treat malaria, pneumonia, and intestinal parasites. These families need your help now! Please accept their thanks and ours for being part of this work of love!

Priscilla Benner, MD  
Director, MAMA Project
